### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Box No. V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

| 1. | Statement |
|----|-----------|
|    |           |

| • | Novelty (N)                   | Yes:<br>No: | Claims<br>Claims | 1-10<br>none |
|---|-------------------------------|-------------|------------------|--------------|
|   | Inventive step (IS)           | Yes:<br>No: | Claims<br>Claims | 1-10<br>none |
|   | Industrial applicability (IA) | Yes:<br>No: | Claims<br>Claims | 1-10<br>none |

2. Citations and explanations (Rule 70.7):

see separate sheet

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

#### Re Item V. Reasoned statement

The following document is referred to in this communication:

D1: WO 01/11370 A (BAYER AG) 15 February 2001

#### 2. Novelty

The subject-matter of independent claims 1,6-9 is considered to be novel, since the photoluminescent compound, the protein detector and the methods described therein are not described in the cited prior art.

Therefore, claims 1-10 fulfil the requirements of Article 33(2) PCT.

#### Inventive step

Document D1 discloses (cf. pages 51-56) photoluminescent indolenine squaraine dyes for labelling/detecting proteins.

The subject-matter of independent claims 1,6-9 is distinguished from this closest prior art through the following feature:

- the photoluminescent squaraine dyes of D1 contain reactive groups (e.g N=C=S or N=C=O) that allow the covalent binding of the dye to the protein to be labelled/detected. The dyes according to the present invention do not contain such reactive groups and therefore they cannot be covalently attached to proteins.

The objective technical problem to be solved by the present invention may therefore be regared as to provide further photoluminescent indolenine squaraine dyes for detecting proteins.

The Applicant has solved the objective technical problem in an inventive manner. Because of the lack of reactive functional groups, the dyes of the present invention are not suitable for covalent protein labelling but can be used for non-specific protein detection and quantification. Being aware of the disclosure of document D1, the

#### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/GB2004/004167

person skilled in the art would not consider it obvious that the compounds of the present application are suitable for detecting proteins. Therefore, the subject-matter of present claims 1-10 appears to involve an inventive step, thus, the claims fulfil the requirements of Article 33(3) PCT.

## 4. Industrial applicability

Claims 1-10 fulfil the requirements of Article 33(4) PCT.

## Re Item VIII. Certain observations on the international application

Claim 6 contains a reference to the description. According to Rule 6.2(a) PCT, claims should not contain such references except where absolutely necessary, which is not the case here.
